Unit II

Syllabus

Responsive Design: What is RWD – Introduction to RWD Techniques – Fluid Layout, Fluid Images and Media queries - Introduction to RWD Framework

Twitter Bootstrap – Bootstrap Background and Features - Getting Started with Bootstrap - Demystifying Grids – OffCanvas - Bootstrap Components - JS Plugins – Customization

Responsive Web Design (RWD)

- To make the Web page look good on all devices
- Uses only HTML and CSS
- It is not a program or a JavaScript
- Web pages can be viewed using many different devices: desktops, tablets, and phones.
- Web page should look good, and be easy to use, regardless of the device.
- Web pages should not leave out information to fit smaller devices, but rather adapt its content to fit any device.

Viewport

- The viewport is the user's visible area of a web page.
- The viewport varies with the device, and will be smaller on a mobile phone than on a computer screen.
- Before tablets and mobile phones, web pages were designed only for computer screens, and it was common for web pages to have a static design and a fixed size.
- Then, when we started surfing the internet using tablets and mobile phones, fixed size web pages were too large to fit the viewport. To fix this, browsers on those devices scaled down the entire web page to fit the screen.

Grid View

- Many web pages are based on a grid-view, which means that the page is divided into columns.
- Using a grid-view is very helpful when designing web pages. It makes it easier to place elements on the page.
- A responsive grid-view often has 12 columns, and has a total width of 100%, and will shrink and expand as you resize the browser window

Media Query

Media query is a CSS technique introduced in CSS3.

It uses the @media rule to include a block of CSS properties only if a certain condition is true.

Design for Mobile First

Mobile First means designing for mobile before designing for desktop or any other device (This will make the page display faster on smaller devices).

Changes are to be carried out in CSS.

Instead of changing styles when the width gets smaller than 768px, change the design when the width gets larger than 768px.

Example 1:

```
<!DOCTYPE html>
<html><head>
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<style>
* {
box-sizing: border-box;
}
.header {
border: 1px solid blue;
padding: 15px;
}
.menu {
width: 25%;
float: left;
padding: 15px;
border: 1px solid green;
}
.main {
width: 75%;
float: left;
padding: 15px;
border: 1px solid orange;
}
</style></head>
<body>
<div class="header">
<h1>School of Computing</h1>
</div>
<div class="menu">
<ul>
<li>B.E. CSE</li>
<li>B.Tech IT</li>
<li>M.E. CSE</li>
<li>M.Tech IT</li>
</ul>
</div>
<div class="main">
<h1>The City</h1>
<p>Department of Computer Science and Engineering</p>
</div>
</body>
</html>
```

Example 2:

```
<!DOCTYPE html>
<html>
<head>
<meta name="viewport" content="width=device-width, initial-scale=1.0">

Bootstrap

- Bootstrap 4 is the newest version of Bootstrap, which is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first websites.
- Bootstrap 4 is completely free to download and use!
- Bootstrap is a free front-end framework for faster and easier web development
- Bootstrap includes HTML and CSS based design templates for typography, forms, buttons, tables, navigation, modals, image carousels and many other, as well as optional JavaScript plugins
- Bootstrap also gives you the ability to easily create responsive designs

Bootstrap can be obtained from

MaxCDN (Content Delivery Network)
getbootstrap.com

To include

```
<!-- Latest compiled and minified CSS -->
<link rel="stylesheet"
      href="https://maxcdn.bootstrapcdn.com/bootstrap/4.0.0/css/
      bootstrap.min.css">
<!-- jQuery library -->
<script
      src="https://ajax.googleapis.com/ajax/libs/jquery/3.3.1/jquery.min.js"></script>
<!-- Popper JS -->
<script
      src="https://cdnjs.cloudflare.com/ajax/libs/popper.js/1.12.9/umd/popper.min.js"
    ></script>
<!-- Latest compiled JavaScript -->
<script src="https://maxcdn.bootstrapcdn.com/bootstrap/4.0.0/js/bootstrap.min.
js"></script>
```

Basic Web page with Bootstrap 4

1. Bootstrap 4 uses HTML elements and CSS properties that require the HTML5 doctype. Always include the HTML5 doctype at the beginning of the page, along with the lang attribute and the correct character set:

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8">
  </head>
  </html>
```

2. Bootstrap 4 is designed to be responsive to mobile devices. Mobile-first styles are part of the core framework. To ensure proper rendering and touch zooming, add the following <meta> tag inside the <head> element:

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

3. Bootstrap 4 also requires a containing element to wrap site contents. There are two container classes to choose from:
- The .container class provides a responsive fixed width container
 - The .container-fluid class provides a full width container, spanning the entire width of the viewport

Example 1:

```
<!DOCTYPE html>
<html lang="en">
<head>
<title>Bootstrap Example</title>
<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1">
<link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/4.0.0/css/bootstrap.min.css">
<script src="https://ajax.googleapis.com/ajax/libs/jquery/3.3.1/jquery.min.js"></script>
<script src="https://cdn.jsdelivr.net/npm/popper.js@1.12.9/dist/umd/popper.min.js"></script>
<script src="https://maxcdn.bootstrapcdn.com/bootstrap/4.0.0/js/bootstrap.min.js"></script>
</head>
<body>

<div class="container">
<h1>Bootstrap Page with Container</h1>
<p>This part is inside a .container class.</p>
<p>The .container class provides a responsive fixed width container.</p>
</div>
<div class="container-fluid">
<h1>Bootstrap Page with container fluid</h1>
<p>This part is inside a .container-fluid class.</p>
<p>The .container-fluid class provides a full width container, spanning the entire width of the viewport.</p>
</div>
</body>
</html>
```

Bootstrap 4 Grid System

Bootstrap's grid system is built with flexbox and allows up to 12 columns across the page.

The columns can be grouped together to create wider columns

The grid system is responsive, and the columns will re-arrange automatically depending on the screen size.

Make sure that the sum adds up to 12 or fewer (it is not required that you use all 12 available columns).

span1	span1	span1	span1	span1	span1	span1	span1	span1	span1	span1	span1	span1
span4				span4				span4				
span4				span8								
span6				span6								
span12												

Grid Classes

The Bootstrap 4 grid system has five classes:

- .col- (extra small devices - screen width less than 576px)
- .col-sm- (small devices - screen width equal to or greater than 576px)
- .col-md- (medium devices - screen width equal to or greater than 768px)
- .col-lg- (large devices - screen width equal to or greater than 992px)
- .col-xl- (xlarge devices - screen width equal to or greater than 1200px)

The classes above can be combined to create more dynamic and flexible layouts.

Each class scales up, to set the same widths for sm and md,it is enough to specify sm.

```

<div class="col" style="background-color:orange;">.col</div>

<p>The small element is used to create a lighter, secondary text in any heading:</p>

```
<h1>h1 heading <small>secondary text</small></h1>
<h2>h2 heading <small>secondary text</small></h2>
<h3>h3 heading <small>secondary text</small></h3>
<h4>h4 heading <small>secondary text</small></h4>
<h5>h5 heading <small>secondary text</small></h5>
<h6>h6 heading <small>secondary text</small></h6>

<h1>4. Highlight Text</h1>

<p>Use the mark element to <mark>highlight</mark> text.</p>

<h1>5. Abbreviations</h1>

<p>The abbr element is used to mark up an abbreviation or acronym:</p>

<p>The <abbr title="User Interface Technologies">UIT</abbr> elective course offered in association with Infosys</p>

<h1>6. Blockquotes</h1>

<p>The blockquote element is used to present content from another source:</p>

```
<blockquote class="blockquote">
```

Navigation Bars

- With Bootstrap, a navigation bar can extend or collapse, depending on the screen size.
- A standard navigation bar is created with the .navbar class, followed by a responsive collapsing class: .navbar-expand-xl|lg|md|sm (stacks the navbar vertically on extra large, large, medium or small screens).
- To add links inside the navbar, use a element with class="navbar-nav". Then add elements with a .nav-item class followed by an <a> element with a .nav-link class
